Operation

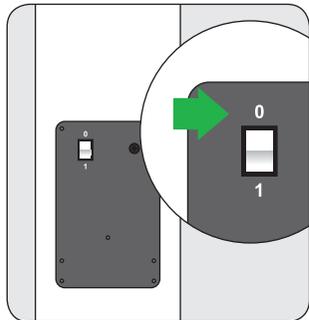

Turn the HydroFill power switch to the ON position.

Attach the HydroFill's quick-connect fitting to a Watering Gun or Stealth.

Fill the battery as required.

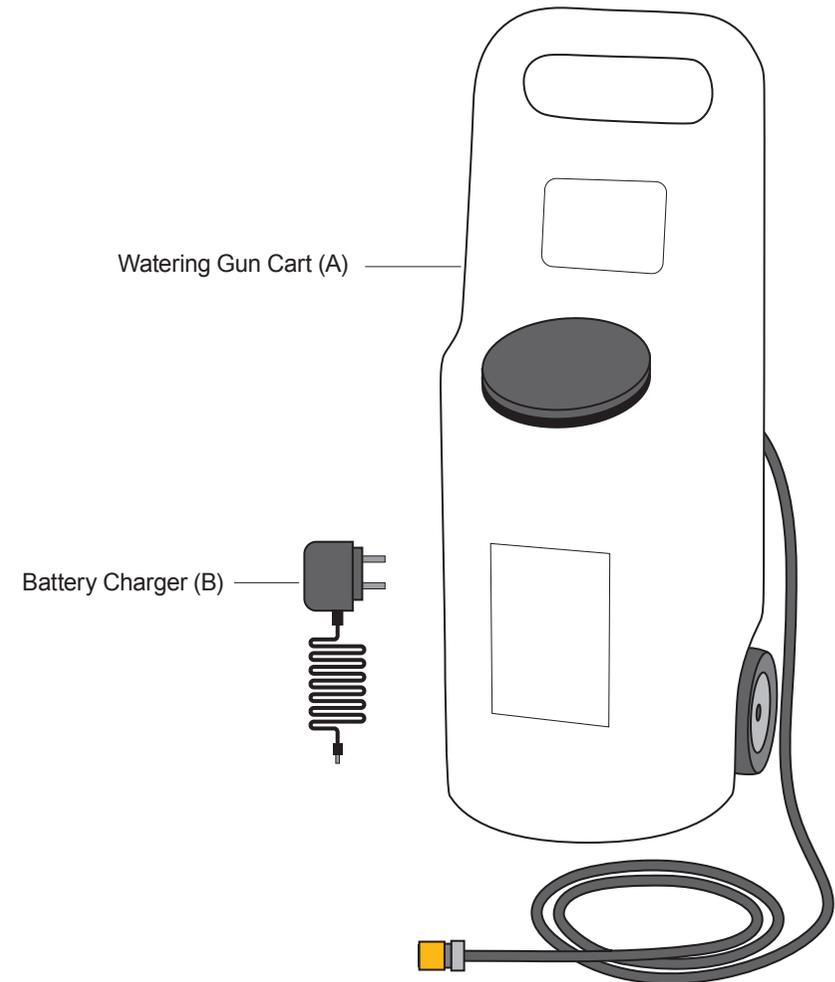

Once operation is complete ensure that the unit is switched to the OFF position.

HydroFill™ Cordless Watering Cart

Installation Instructions

This pack contains:

- 1 x Cordless Watering Cart (A)
- 1 x Battery Charger (B)

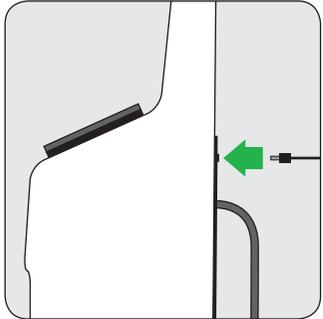

HEALTH AND SAFETY PRECAUTIONS

Batteries contain sulphuric acid, always wear approved protective clothing (gloves, goggles and apron).

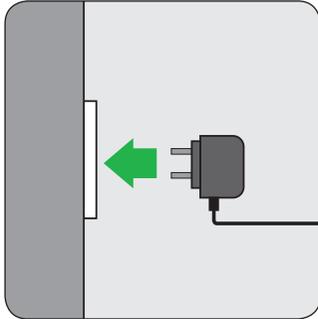

Installation

The HydroFill unit is shipped in one carton and is completely assembled. The battery charger is the only part not attached to the cart.

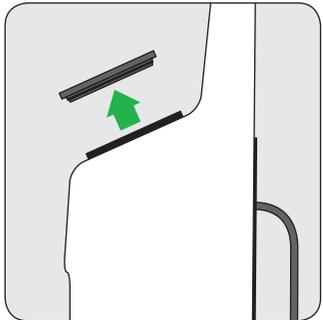

Insert the 12 Volt plug of the Charger Unit into the socket on the back of the HydroFill Cart.

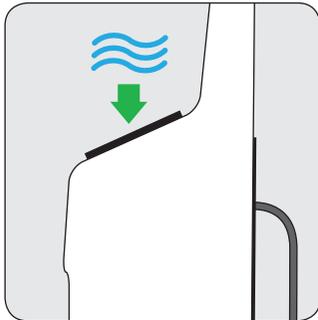

Plug the charger into a grounded indoor mains socket located in a dry area.

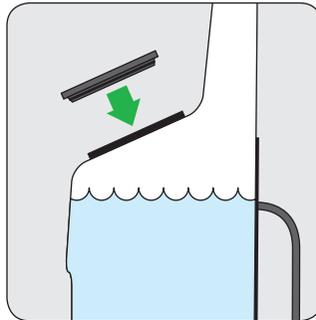

The unit will be completely charged after 13 hours (see note on page 3).

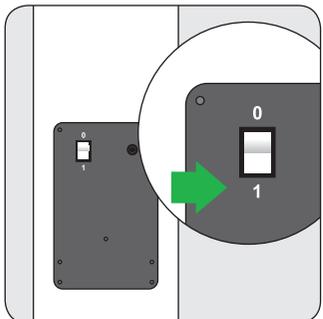

Remove the black cap from the HydroFill tank.

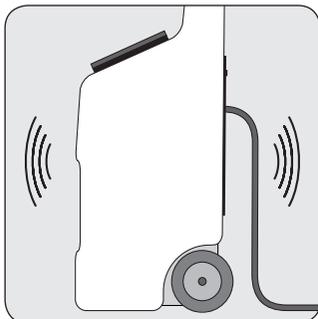

Fill the tank with deionized water.

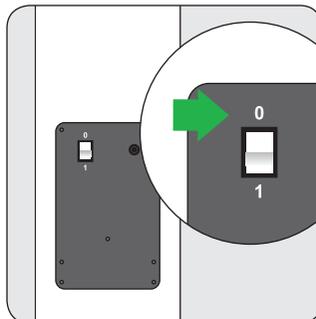

Replace the black cap when the tank is full.

Turn the HydroFill power switch to the ON position.

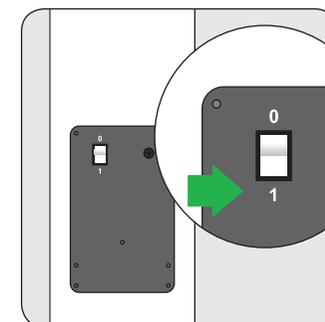

The pump will activate and vibrate briefly (if not, connect the battery as shown on page 3).

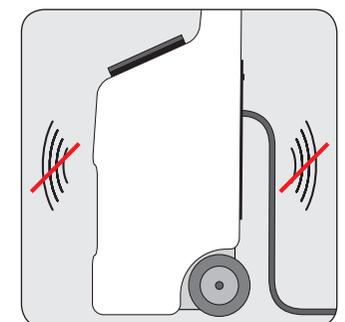

Turn the HydroFill power switch to the OFF position.

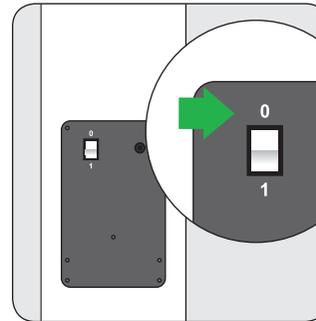

The HydroFill is working correctly and ready for use.

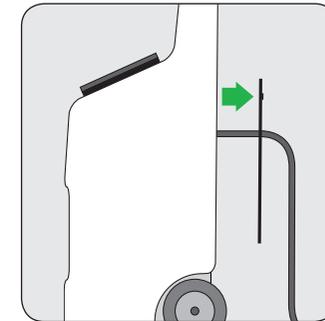

Turn the HydroFill power switch to the ON position.

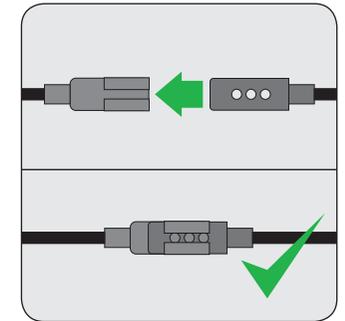

If the pump does not activate and vibrate briefly you will need to connect the battery as follows.

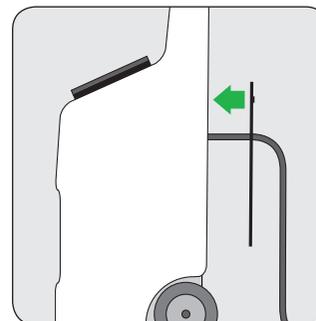

Ensure that the unit is switched to the OFF position.

First remove the screws and then remove the back cover of the HydroFill unit.

Locate the two battery connectors and join to make a secure connection.

Once complete replace the back cover and secure the screws.

The HydroFill is now ready for use.

PLEASE NOTE: Although frequent charging will not damage the battery it may shorten the battery's life and so is not recommended. A low battery will cause low water pressure and the Watering Gun may not shut off properly. Always disconnect the charger when not in use.
