Battery powered electric golf carts deliver efficient reliability and cost-effective operation for moving around golf links, a warehouse operation, institutional campus or other large areas. The useful life of a golf cart will always extend past the life of the original batteries installed in the vehicle – so vehicle owners and operators need to understand best practices for ensuring that battery replacement is effective, safe and economical. Fortunately, with a little bit of preparation replacement of golf cart batteries can be uncomplicated.

#### CHOOSING THE RIGHT BATTERY

The first rule for battery replacement is to make sure that the batteries in your vehicle actually require replacement. Most battery powered vehicles are fitted with a series of 6-volt golf cart batteries, 8-volt or 12-volt golf cart batteries that are connected in 36 or 48-volt sets. When one or more golf cart batteries in the vehicle begin to fail they can seriously affect the health of the remaining batteries in your equipment. Due to this, it is important to periodically inspect: the condition of the batteries, the connections to the batteries and the vehicle's battery charger. This helps to ensure that the entire system is functioning properly and maintaining the batteries in a fully charged state. Because batteries are installed in series and work together – the battery set is only as strong as its

weakest unit. To ensure optimal performance and reliability, it is generally recommended that you replace all the batteries in your vehicle even if only one or two are in need of replacement. When doing so – consult equipment professionals who are familiar with your vehicle to identify the best option for sourcing replacements.

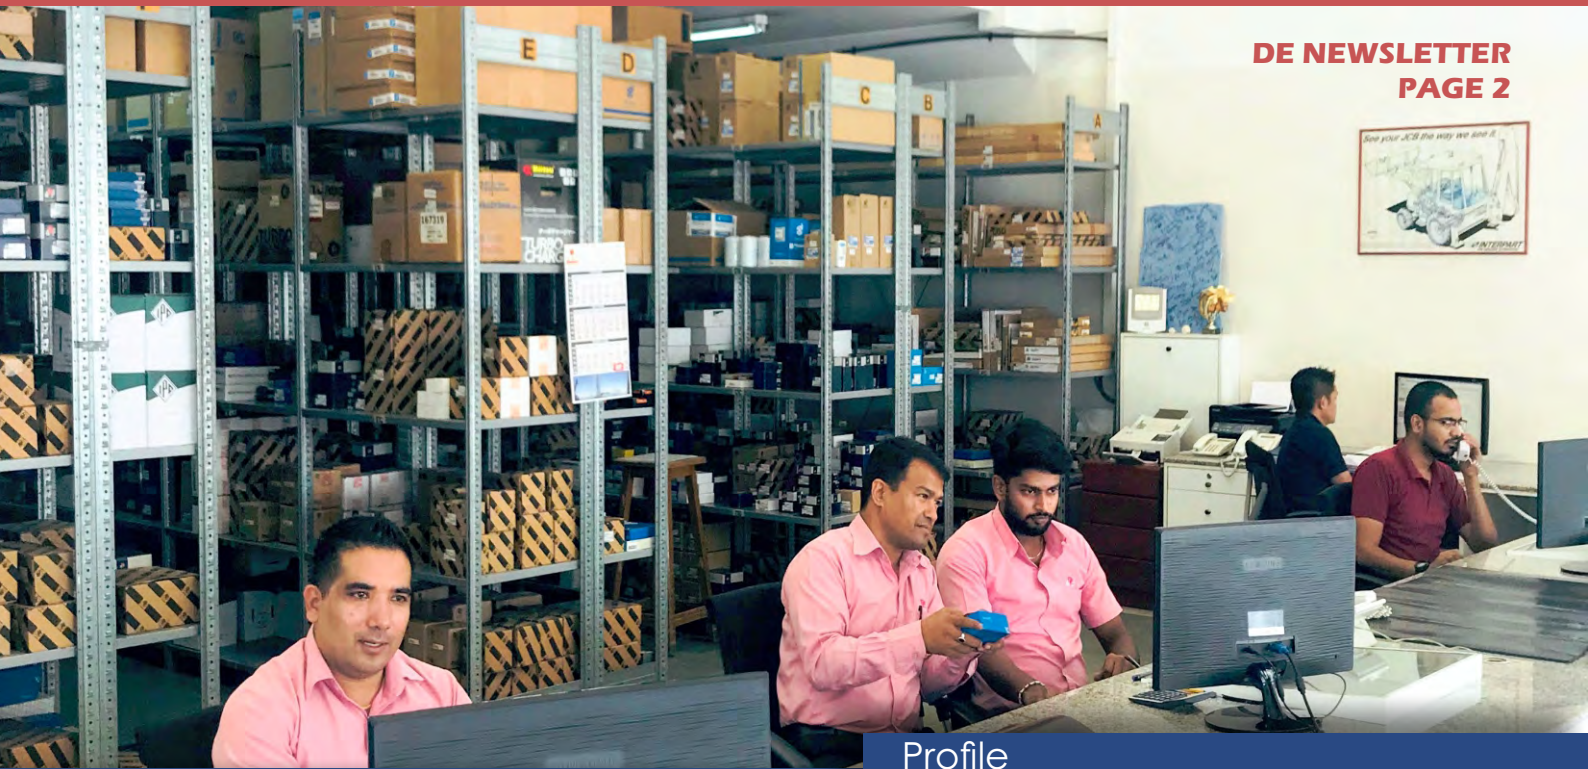

***"Durability, reliability  
and proven deep cycle  
technology mean you  
can depend on Rolls  
batteries for consistent  
performance day in and  
day out."***

The importance of reliable battery power in personal mobility cannot be overstated. People rely on wheelchairs, scooters, and other mobility equipment for independence and safety. That's why Rolls have designed batteries with superior power, reliable performance and maintenance-free technology.

Every day, golf car and electric vehicle manufacturers are integrating technological advancements requiring more powerful battery technology.

***“Work is an expression of one's personality and expertise. But finding the right fit between career and personality does not happen very often.”***

## Profile

# Kripa Dhwja Giri

by Ravindra Kumar

Branch Manager - Dahbashi Trading Est.,  
Sharjah

Kripa Dhwja Giri joined Dahbashi Engineering as a Store Helper in 2005. Little did he know back then, that he would be destined to find his calling in Sales and Marketing.

In an endeavor to find a suitable professional, management selected Kripa for the position of Branch Helper for Sharjah Branch in 2008. His passion and commitment to the organization proved to be the drivers of his career growth.

A person who loves his work enjoys a happy and healthy life. Balancing professional and personal life is also an important factor as this solidifies our identity as well as determines our overall quality of life. Dedication to work translates into finding the inspiration to do something purposeful in life.

Kripa's dedication to his career coupled with proper guidance from the sales and marketing team opened up his path for the new position of Sales Assistant in 2012. He gradually grew his marketing skills, started interacting with people and assuming new responsibilities. This eventually led to his promotion to Senior Counter Salesman in 2016.

Presently, he is handling prospective clients at Sharjah Branch in addition to his numerous contributions at the sales counter. A good team leader, Kripa promotes professional work ethics amongst his peers and also provides input on parts inventory stocks to his branch manager. His assistance in helping junior colleagues to grow their own careers is also commendable.

We wish him good luck and a successful life always.
